MIKE **QUINN**

Gig Harbor, WA · (253) 225-5277

mquinnq@gmail.com · LinkedIn Profile · Resume on GitHub

Senior backend and cloud engineer with 30+ years designing and shipping production systems in C#/.NET. Recent focus: Azure and AWS microservices, event-driven Azure Functions, real-time audio streaming and telephony integrations, and AI-driven voice workflows. Deep background in enterprise architecture, CI/CD automation, and security and compliance (PII, HIPAA, OAuth 2.0).

Specialties: Backend Architecture, Cloud-Native Microservices, Real-Time Streaming, Deployment Automation, C#/.NET, Secure API Design

EXPERIENCE

OCTOBER 2026 – PRESENT

FOUNDER, PANURGY TECH

Relaunched Panurgy Tech to build and market software products
Led the team that built the Bulletin Board service, delivering content through secure token links that can be revoked, expire automatically, and log each view
Designing abuse safeguards ahead of opening the service to wider public use
Exploring secure, expiring access-code delivery for rental and real estate properties built on the same token-link platform
Previously operated Panurgy Tech (2003 – 2010) as an independent consulting practice alongside full-time roles, delivering custom web and Windows applications for sales, marketing, office and inventory management, and sports analytics clients

OCTOBER 2024 – PRESENT

SENIOR BACKEND ENGINEER, BROADPOINT GROUP

Designed and deployed Azure Functions to handle critical business workflows with scalable, event-driven execution (both on-demand and timer-based)
Built the User Details API with full PII compliance
Created a standardized microservice template aligned with SOLID principles
Reviewed and enhanced backend APIs as one of four engineers on the backend team
Supported production deployments and troubleshooting across Azure resources, including

API Management (APIM), Virtual Machines, configuration, Application Insights, and Redis
Updated Engineering Design Documents to clarify design decisions and downstream impact

Key Technologies:
C#, .NET, Entity Framework Core, REST API, GraphQL, Azure (DevOps, B2C, Functions, APIM, VMs, Monitor), Redis, SQL Server

JANUARY 2022 – OCTOBER 2024

SENIOR FULL STACK ENGINEER, MAJORBOOST

Built backend services to receive live audio streams and perform real-time transcription
Connected C# and Python services through Kafka to generate AI responses to live voice calls
Integrated client telephony through Twilio, Telnyx, and Sinch APIs and SDKs
Created a suite of REST API endpoints for frontend functionality and direct client telephony integrations
Built a responsive client UI with Blazor, backed by a code-first Entity Framework data model
Implemented Redis caching, including invalidation mechanisms
Maintained CI/CD with infrastructure as scripts across GitHub and AWS
Upheld a high bar for client experience and security, including HIPAA requirements, in a fast-moving startup environment

Key Technologies:
C#, .NET, Python, Entity Framework Core, REST API, gRPC, Kafka, Blazor, Telephony APIs and SDKs (Twilio, Telnyx, Sinch), Google real-time speech-to-text, real-time text-to-speech, AWS (ECS, CloudWatch, X-Ray, Polly), GitHub, Redis, PostgreSQL, Grafana, OpenTelemetry, Node.js, JavaScript, Ubuntu

OCTOBER 2008 – JANUARY 2022

ENTERPRISE ARCHITECT, CIC PLUS, INC.

Rearchitected the client flagship site
Performed bi-monthly automated releases for 70+ internal applications
Developed new electronic form-based business lines for government, HR, and compliance workflows
Planned and implemented the application stack migration from ASP.NET Web Forms to MVC

Worked with an active team of 20 developers maintaining 5 distinct business lines
Led the move of the development group to an Agile lifecycle
Owned application security and the core application framework
Created OAuth 2.0 services for custom claims-based authentication using X.509 certificates
Built a reverse proxy for HTTP/S and custom ports to manage API endpoints, with version hiding, circuit breaking, and throttling
Led planning, architecture, and proofs of concept for the move to Azure
Transitioned the development group from VSTFS to Azure DevOps, building and maintaining CI/CD pipelines, releases, and artifacts
Developed WCF solutions (self-hosted and IIS-hosted) for messaging and partner integrations
Implemented SOAP and REST API endpoints supporting multiple content types
Created Windows services for time-sensitive scheduled tasks and Windows applications for customer service to configure client site features
Adopted Bootstrap for responsive views and championed WCAG 2.0 accessibility recommendations

MAY 1999 – OCTOBER 2007

SENIOR CLIENT/SERVER ARCHITECT, LABOR READY, INC.

Led research, technology choices, architecture, system design, base classes, and the migration to Microsoft .NET and C# for a team of 24
Managed new technology, change requests, and bug fixes for a development team serving 2,500+ users in 850+ offices across the US, Canada, and the UK
Developed and maintained a suite of applications coordinating remote sites, replacing RemoteWare
Developed and maintained Payroll, A/R, Customer, Reporting, Employee, and User Account applications in Delphi, including employer payroll logic for state overtime and workers' compensation
Adopted Smart Client Software Factory (SCSF), Enterprise Library, WCF, and IDesign coding practices
Developed software to communicate with Diebold ATM systems, plus new components and threaded solutions
Provided internal mentoring and training, coordinated external training, and led code reviews for legacy and new development
Managed contract resources and worked within PMO, SDLC, SOX, and ITIL processes,

including requirements gathering and documentation

1991 – 1999

EARLIER EXPERIENCE

Software Developer, New England Shipping Systems (1998 – 1999): built an internal MIS with Sybase and Delphi; integrated shipping systems with AS/400 and PC accounting and inventory systems

Lead Developer, ATG Technologies (1995 – 1998): developed PC-based telephony and ACD systems with Visual C++, Microsoft SQL, and ISDN; managed R&D programmers

Adjunct Instructor, Santa Fe Community College (1993 – 1994): taught Introduction to Computers and Pascal Programming

Assistant Network Administrator, Santa Fe Community College (1991 – 1994): built a 14,000-user campus e-mail system and co-designed a 24-building campus network

EDUCATION

JUNE 1992

ASSOCIATE IN COMPUTER ENGINEERING, SANTA FE COMMUNITY COLLEGE

Computer theory

Algorithms and logic

SKILLS

- Languages: C#, Python, C++, SQL, JavaScript, Delphi
- Frameworks: .NET / .NET Core, ASP.NET MVC, Blazor, Entity Framework Core, WCF, WPF
- Cloud: Azure (Functions, APIM, B2C, DevOps, Monitor), AWS (ECS, CloudWatch, X-Ray)
- Real-Time: Telephony (Twilio, Telnyx, Sinch), audio streaming, speech-to-text, text-to-speech
- Data: SQL Server, PostgreSQL, Redis, Kafka
- APIs & Security: REST, GraphQL, gRPC, OAuth 2.0, SAML, PII and HIPAA compliance
- Practices: Microservices, distributed systems, CI/CD, observability (OpenTelemetry, Grafana)
- Process: Agile, SDLC, ITIL, SOX
